EXPLANATION OF SYMBOLS

Read all safety information before operating the equipment. Save these instructions.

To reduce the risks of fire or explosion, electrical shock and the injury to persons, read and understand all instructions included in this manual. Be familiar with the controls and proper usage of the equipment.

This symbol indicates a potential hazard that may cause serious injury or loss of life. Important safety information will follow.

This symbol indicates a potential hazard to you or to the equipment. Important information that tells how to prevent damage to the equipment or how to avoid causes of minor injuries will follow.

Danger of fire from solvent and paint fumes

Danger of explosion from solvent, paint fumes and incompatible materials

Electric shock hazard

Notes give important information which should be given special attention.

GROUNDING INSTRUCTIONS

This product must be grounded. In the event of an electrical short circuit, grounding reduces the risk of electric shock by providing an escape wire for the electric current. This product is equipped with a cord having a grounding wire with an appropriate grounding plug. The plug must be plugged into an outlet that is properly installed and grounded in accordance with all local codes and ordinances.

WARNING - Improper installation of the grounding plug can result in a risk of electric shock.

If repair or replacement of the cord or plug is necessary, do not connect the green grounding wire to either flat blade terminal. The wire with insulation having a green outer surface with or without yellow stripes is the grounding wire and must be connected to the grounding pin.

Check with a qualified electrician or serviceman if the grounding instructions are not completely understood, or if you are in doubt as to whether the product is properly grounded. Do not modify the plug provided. If the plug will not fit the outlet, have the proper outlet installed by a qualified electrician.

This product is for use on a nominal 120 volt circuit and has a grounding plug that looks like the plug illustrated below. Make sure that the product is connected to an outlet having the same configuration as the plug. No adapter should be used with this product.

![Grounded Outlet](image)

IMPORTANT ELECTRICAL INFORMATION

Use only a 3-wire extension cord that has a 3-blade grounding plug and a 3-slot receptacle that will accept the plug on the product. Make sure your extension cord is in good condition. When using an extension cord, be sure to use one heavy enough to carry the current your product will draw. An undersized cord will cause a drop in line voltage resulting in loss of power and overheating. A 14 gauge or 12 gauge cord is recommended. If an extension cord is to be used outdoors, it must be marked with the suffix W-A after the cord type designation. For example, a designation of SJTW-A would indicate that the cord would be appropriate for outdoor use.

Household use only. Intended for indoor/outdoor use ONLY with materials having flashpoint above 100°F (38°C).
IMPORTANT SAFETY INFORMATION

SAFETY HAZARDS

HAZARD: EXPLOSION OR FIRE
Flammable vapors, such as solvent and paint vapors, in work area can ignite or explode.

PREVENTION:
• Do not spray flammable or combustible materials near an open flame, pilot lights or sources of ignition such as hot objects, cigarettes, motors, electrical equipment and electrical appliances. Avoid creating sparks from connecting and disconnecting power cords.
• For use with only water-based or mineral spirit-type materials with a minimum flash point of 100°F (38°C) — Do not spray or clean with liquids having a flash point of less than 100°F (38°C). Flash point is the temperature at which a fluid can produce enough vapor to ignite.
• Verify that all containers and collection systems are grounded to prevent static discharge.
• Connect to a grounded outlet and use grounded extension cords (electric models only). Do not use a 3 to 2 adapter.
• Keep spray area well ventilated. Keep a good supply of fresh air moving through the area to keep the air within the spray area free from accumulation of flammable vapors. Keep turbine assembly in well ventilated area. Do not spray turbine assembly.
• Do not smoke in the spray area.
• Do not operate light switches, engines, or similar spark producing products in the spray area.
• Keep area clean and free of paint or solvent containers, rags, and other flammable materials.
• Know the contents of the paint and solvents being sprayed. Read all material Safety Data Sheets (SDS) and container labels provided with the paints and solvents. Follow the paint and solvent manufacturer’s safety instructions.
• Fire extinguisher equipment shall be present and working.
• Never expose the equipment to rain. Store indoors.
• Keep electrical cord plug and spray gun trigger free from paint and other liquids. Never hold the cord at plug connections to support the cord. Failure to observe may result in an electrical shock.

HAZARD: ELECTRIC SHOCK
This product can cause injury due to electric shock.

PREVENTION:
• Power cord must be connected to a grounded circuit.
• Never submerge electrical parts.

HAZARD: GENERAL
This product can cause severe injury or property damage.

PREVENTION:
• Always wear appropriate gloves, eye protection, clothing and a respirator or mask when painting. Hazardous vapors – Paints, solvents, insecticides, and other materials can be harmful if inhaled or come in contact with body. Vapors can cause severe nausea, fainting or poisoning.
• Do not operate or spray near children. Keep children away from equipment at all times.
• Do not overreach or stand on an unstable support. Keep effective footing and balance at all times.
• Stay alert and watch what you are doing.
• Do not operate the unit when fatigued or under the influence of drugs or alcohol.
• Never aim spray gun at any part of the body.
• Follow all appropriate local, state, and national codes governing ventilation, fire prevention, and operation.
• The United States Government Safety Standards have been adopted under the Occupational Safety and Health Act (OSHA). These standards, particularly part 1910 of the General Standards and part 1926 of the Construction Standards should be consulted.
• Use only manufacturer authorized parts. User assumes all risks and liabilities when using parts that do not meet the minimum specifications and safety devices of the turbine manufacturer.
• Power cord must be connected to a grounded circuit.
• Do not spray outdoors on windy days.
• Use only Wagner hose.
CONTROLS AND FUNCTIONS

THANK YOU FOR YOUR PURCHASE!

Thank you for purchasing the Wagner FLEXiO sprayer with best-in-class features that are designed for spraying residential paint, un-thinned, indoors or out. Only the FLEXiO sprayers have the power of the X-Boost® turbine and versatility of the iSpray nozzle that will help you finish projects fast and professionally. They are easy to use right out of the box and with low overspray and less clogging you will enjoy the flexibility to tackle all the painting projects on your list. We appreciate your feedback, so please visit our website and write a review on the FLEXiO handheld sprayer so we can continue to learn and improve our products.

Just click on www.wagnerflexio.com
CONTROLS AND FUNCTIONS

**X-BOOST™ POWER DIAL**
The X-Boost power dial adjusts the level of air power produced by the turbine.

**MATERIAL FLOW CONTROL**
The material flow control determines the amount of spray material that is sprayed from the spray nozzle.

- **iSpray Nozzle** - The material flow can be adjusted incrementally from 1 (minimum) to 12 (maximum) by turning the adjustable material flow control.
- **Gravity Feed Nozzle** - Set the material flow by turning the knob on the trigger of the spray gun.

**TRIGGER**
Pulling the trigger will deliver spray material from the material container to the nozzle assembly, where it is sprayed.

**SPRAY WIDTH LEVER**
The spray width lever determines the width of the spray pattern.

**AIR CAP**
Adjust the spray pattern by turning the air cap ears. Adjust the air cap to your intended movement direction of the spray gun.

- Horizontal pattern (use ‘up and down’ spraying motion)
- Vertical pattern (use ‘side to side’ spraying motion)
Material to be sprayed may need to be strained to remove any impurities in the paint which may enter and clog the system. Impurities in the paint will give poor performance and a poor finish. Only thin the material if absolutely necessary to improve spray performance. Optimal spray performance should be achieved simply by adjusting the various controls on the unit.

TO PREPARE THE MATERIAL

Follow these steps for use with the iSpray nozzle only. If using the gravity feed nozzle, skip to the instructions on page 8-9.

1. Stir the spraying material thoroughly.
2. Unscrew the cup from the nozzle.
3. After the material has been properly thinned* (if necessary) and strained, fill the container to desired level.

*THINNING THE MATERIAL

For certain spraying situations or desired finishes, thinning the material may be desired. It is not necessary for most materials when used with the iSpray nozzle. For use with the Gravity Feed nozzle thinning may be needed to achieve a finer finish. Make sure you adjust the X-Boost™ and Material flow settings for your specific material needs.

If thinning is necessary, use the proper solvent as specified by the material manufacturer. Never exceed the thinning advice given by the coating manufacturer.

Do not thin with materials that have a flashpoint below 100°F (38°C).
NEVER point the spray gun at any part of the body.

Attention

Make sure the power cord is unplugged.

**iSPRAY ASSEMBLY**

1. Insert the suction tube into the intake opening.
2. Align the pickup tube:
   A If spraying downward, the angled end of the pickup tube should be pointing toward the front of the nozzle.
   B If spraying upward, the angled end of the pickup tube should be pointing toward the rear of the nozzle.

   Make sure the pickup tube is inserted as far as it will go to ensure a tight fit.

3. Carefully screw the cup back onto the nozzle assembly. Tighten firmly.
4. Align the nozzle and the handle approximately as shown.
5. Insert and twist the nozzle into the handle toward the “lock” symbol on the handle.
   The tab below the trigger will lock the two pieces into place.
6. Insert the air hose tightly into the connection on the spray gun handle. The connection can be positioned as desired.
   Insert the air hose tightly into the connection into the turbine. The connections can be positioned as desired.

   **Attention**

   NEVER point the spray gun at any part of the body.
The spray materials can be either unthinned or slightly thinned (see page 10 for thinning recommendations based on material).

**GRAVITY FEED NOZZLE ASSEMBLY**

*Attention*

- Make sure the power cord is unplugged.

1. Prior to filling or attaching the desired container, attach the nozzle to the handle.
   Align the nozzle and the handle approximately as shown.

2. Insert and twist the nozzle into the handle toward the "lock" symbol on the handle.
   The tab below the trigger will lock the two pieces into place.

3. Rotate the stand (A) forward so that the nozzle and handle assembly can stand independently.

4. Attach the gravity cup (choose the desired size). Drop the cup onto the nozzle so that the tabs (B) line up with the slots in the nozzle (C) as shown.
   Twist the cup clockwise until it locks in place (D).

5. Securely attach the air tube to the fitting on the container lid. And make sure the other end is tightly secured to the spray gun.

6. Insert the air hose tightly into the connection on the spray handle. The connection can be positioned as desired.
   Insert the air hose tightly into the connection into the turbine. The connections can be positioned as desired.
GRAVITY FEED NOZZLE MATERIAL PREPARATION AND SETUP

The gravity feed nozzle can be unstable when in the stand position. Take care to not knock it over when filling or any time material is inside the container.

FILLING THE GRAVITY CONTAINER

Make sure the power cord is unplugged.
Never remove the container from the spray gun when it has material in it. Material will leak out.

1. Hold the container steady with one hand, and unthread the container lid (with air tube still attached).
   Make sure not to allow the container to loosen on the spray gun.

2. After the material has been properly thinned* (if necessary) and strained, fill the container to desired level.

3. Reattach the container lid. Tighten by hand.
   The lid must be on tight in order to build air pressure in the container and spray properly.

4. When ready to spray, the stand can be put back into the upright position so that it does not interfere with the spray nozzle.
   Set the stand back into its lower position whenever the spray gun needs to be set down. DO NOT set the gravity feed nozzle down on its side as it may leak.

*THINNING THE MATERIAL

For certain spraying situations or desired finishes, thinning the material may be desired. It is not necessary for most materials when used with the iSpray nozzle. For use with the Gravity Feed nozzle thinning may be needed to achieve a finer finish. Make sure you adjust the X-Boost™ and Material flow settings for your specific material needs.

If thinning is necessary, use the proper solvent as specified by the material manufacturer. Never exceed the thinning advice given by the coating manufacturer.

Do not thin with materials that have a flashpoint below 100°F (38°C).
POWER AND MATERIAL CONTROLS

Spray performance will depend upon a number of factors: material thickness, air power, spray pattern selected, and material flow. Testing different variations of the control settings will help you achieve the desired results. See descriptions and suggested Power and Material Settings Guide below to help with your project.

X-BOOST™ POWER DIAL

The X-Boost™ power dial adjusts the level of air pressure produced by the turbine. The X-Boost™ power dial is factory-set at maximum out of the box.

- A high air power level will result in faster coverage and a smoother finish with thicker materials.
- Lowering the air power will result in larger drops of material being sprayed from the gun, and will create a slightly rougher finish.

Tip: The thicker the material you are spraying, the higher the turbine power you will need.

Tip: For fine-finish work with thinner materials, you may want to decrease the air power. Spraying a thinner material at high air power will result in more overspray. Overspray is sprayed material that does not stick to the spray surface and bounces back.

MATERIAL FLOW CONTROL

The material flow control determines the amount of spray material that is sprayed from the spray gun.

iSpray Nozzle - The material flow can be adjusted incrementally from 1 (minimum) to 12 (maximum) by turning the adjustable material flow control

Gravity Feed Nozzle - Set the material flow by turning the knob on the trigger of the spray gun.

- For thicker materials, it is recommended that you start with the highest material flow setting and then gradually decrease the flow to suit your particular spraying needs.
- For thinner materials, it is recommended that you start with a low material flow setting, and then gradually increase the flow to suit your particular spraying needs.
- The higher the flow setting, the quicker you will have to work in order to avoid drips and sags in your spray pattern.

Tip: Spraying with the control set too high will result in a spray pattern that runs and sags (too much material).

Tip: Spraying with the control set too low will result in a spray pattern that does not cover (not enough material).

## SPRAY PATTERN ADJUSTMENT

### ADJUST SPRAY SHAPE

Adjust the spray pattern by turning the air cap ears. Adjust the air cap position to your intended direction of the spray gun.

The positions of the air cap and the corresponding spray pattern shapes are illustrated below.

Test each pattern and use whichever pattern is suitable for your application.

- **Never** trigger the gun while turning the adjustment ring. **Never** point the spray gun at any part of the body.

- **Attention** When changing the spray pattern, make sure the black retaining ring is not loosened.

- *The air cap can be set diagonally on the Gravity Feed nozzle only. To achieve a round pattern with the iSpray nozzle, see the “Adjust Spray Width” section.*

### ADJUST SPRAY WIDTH (iSPRAY ONLY)

The spray width lever on the iSpray nozzle determines the width of the spray pattern.

**TIPS:**

1. Start with a narrow fan pattern for painting trim work (1-5" width) and touch ups. Use a wide pattern for larger surfaces like doors and walls (>5" width).

2. Adjust Material & Air Flow settings as shown in chart based on coating, fan pattern width, and nozzle.

3. Fine tune the Material and Air Power settings to achieve the best results for your application. Use provided spray poster to test.

4. Recommended settings for Material and Air Power may change if the coating is thinned.

The room you are spraying must be properly masked in order to prevent overspray from covering woodwork, floors or furnishings. Make sure you have properly masked the room per the instructions on the enclosed “Taping Guide”.

If spraying with a paint sprayer is new or unfamiliar to you, it is advisable to practice on a piece of scrap wood or cardboard before beginning on your intended workpiece and/or test with water.

Watch videos on proper use and get tips and tricks at www.wagnerspraytech.com/sprayer-tips-and-tricks-videos/

A spray poster is included with your unit. The spray poster can be adhered to a spraying surface and can be used for practice. Follow the guidelines on the poster.

All objects to be sprayed should be thoroughly cleaned before spraying material on them. Areas not to be sprayed may, in certain cases, need to be masked or covered.

The spray area must be clean and free of dust in order to avoid blowing dust onto your freshly sprayed surface.

It is important to keep your arm moving whenever the gun is being triggered. If you pause or linger in one spot too long, too much material will be sprayed to the surface.

- Position the spray gun perpendicular to and six (6) to eight (8) inches from the spray surface, depending upon the spray pattern size desired. With reduced material flow and air power, you can get closer to the spraying surface.
- Spray parallel to the surface with smooth passes at a consistent speed as illustrated below. Doing this will help avoid irregularities in the finish (i.e. runs and sags).
- Always apply a thin coat of material on the first pass and allow to dry before applying a second, slightly heavier coat.
- When spraying, overlap each spray pass by at least 50% This will ensure full coverage.
- When spraying, always trigger the spray gun after spray pass has begun and release trigger before stopping the pass. Always keep the gun pointed squarely at the spray surface and overlap passes slightly to obtain the most consistent and professional finish possible.

- When using the Gravity Feed nozzle, do not tip the nozzle more than 45º to the side. Do not lay the Gravity Feed nozzle down on its side. Always use the gun holder on the turbine or the stand.

If you notice spray material entering the air tube when using the Gravity Feed nozzle, stop spraying IMMEDIATELY and clean out the tube (see page 17).

During a project, periodically wipe the nozzle tip with a cloth to remove any dried paint.

When you quit spraying for any length of time, turn the turbine OFF and place the spray gun into the spray gun holder on the turbine, or use the stand when using the Gravity Feed nozzle.
PROPER SPRAYING TECHNIQUE

Use the images and guidelines below in order to assist you in achieving the desired spray pattern for your project. These are meant to be general starting points - you may have to slightly modify certain controls on the system in order to get the exact performance you need.

LARGE SURFACE PROJECTS

Generally, high material flow and air power are needed for spraying large surface areas, such as walls and decks.

The iSpray nozzle is ideal for these applications and is designed for broad coverage in either horizontal or vertical spraying.

- The air cap position will determine the movement direction of the spray gun.

SMALL SURFACE PROJECTS

Generally, low material flow and air power are needed for spraying smaller surface areas, such as corners, lattice, or spindles.

For this type of project, reduce power, material flow and switch to a narrow width when using the iSpray nozzle, or use the Gravity Feed nozzle.

NOTES:

- If you feel the material is going on too thin, increase the material flow.
- If you feel the material is going on too thick, decrease the material flow even further or move the spray gun further away from the surface.

Besides adjusting the controls, other factors that should be considered when spraying:

- **Distance from the spray object** - if you are too far from the spraying surface, the material will go on too thin, and vice versa.
- **Material thickness** - if the spray pattern runs and/or is too splotchy, the material may need to be thinned.
- **Spray gun movement** - moving the gun too quickly will cause the spray pattern to be too thin and excess overspray. Moving the gun too slowly will cause the spray pattern to be too coarse or thick.

*Only thin the material if absolutely necessary to improve spray performance. Optimal spray performance should be achieved simply by adjusting the various controls on the unit.

If the material needs to be thinned, dilute the material in steps of 5% - 10% until the desired spray pattern is achieved.

If after following the guidelines on these two pages you are still not getting the spray performance you need, refer to the ‘Troubleshooting’ section on page 18.
When cleaning, use the appropriate cleaning solution (warm, soapy water for latex materials; mineral spirits for oil-based materials).

**FLUSHING THE UNIT (iSPRAY ONLY)**

Follow these steps when using the iSpray nozzle only. If using the Gravity Feed nozzle, follow the steps on the next page.

Special cleanup instructions for use with flammable solvents (must have a flashpoint above 100°F (38°C):

- Always flush spray gun outside.
- Area must be free of flammable vapors.
- Cleaning area must be well-ventilated.
- Do not submerge turbine!

1. Unplug the power cord. Loosen the material container by 1/2 turn, but do not remove it. This will relieve any pressure left over in the system.
   Pull the trigger so that the material inside the spray nozzle drains back into the container.

2. Unscrew the container and remove. Empty any remaining material back into the material container.

3. Pour a small amount of the appropriate cleaning solution into the cup (Water=1/2 full. Mineral spirits=1/4 full).

4. Attach the cup to the nozzle and plug in the sprayer.

5. Spray the cleaning solution into a safe area.
   While spraying, gently shake the spray gun. This slight agitation will help break up smaller particles of spray material.

6. Unplug the power cord. Loosen the material container by 1/2 turn, but do not remove it. This will relieve any pressure left over in the system.
   Pull the trigger so that the material inside the spray nozzle drains back into the container.

   If you cleaned the sprayer using mineral spirits, repeat steps 1-6 using warm, soapy water.

---

**Attention**

Move on to “Cleanup - Cleaning the Nozzle”, page 16.
CLEANUP

When cleaning, use the appropriate cleaning solution (warm, soapy water for latex materials; mineral spirits for oil-based materials).

FLUSHING THE UNIT (GRAVITY FEED NOZZLE ONLY)

It is recommended that whenever possible, the cup should be sprayed until empty. This will make it easier to clean.

If there is still material in the cup, follow all steps below. If it is empty, skip to step 5.

Special cleanup instructions for use with flammable solvents (must have a flashpoint above 100ºF (38ºC):
• Always flush spray gun outside.
• Area must be free of flammable vapors.
• Cleaning area must be well-ventilated.
• Do not submerge turbine!

1. Switch the turbine OFF. Remove the air hose assembly. Carefully separate the handle from the spray nozzle.
2. Hold the container steady with one hand, and unthread the container lid (with air tube still attached).
   Make sure not to allow the container to loosen on the spray gun.
3. Flip the stand down. Carefully tip the container back into the original container to empty any remaining material back into the material container.
4. Reattach the handle and air hose assembly.
5. Make sure turbine is turned OFF. Using the stand, set the nozzle upright and pour a small amount of the appropriate cleaning solution into the container (Water=1/2 full. Mineral spirits=1/4 full).
6. Replace the container lid. Switch the turbine ON. Spray the cleaning solution into a safe area.
   While spraying, gently shake the spray gun. This slight agitation will help break up smaller particles of spray material.
   Switch the turbine OFF.

If you cleaned the sprayer using mineral spirits, repeat steps 5-6 using warm, soapy water.

Move on to “Cleanup - Cleaning the Nozzle”, next page.
CLEANUP (CONTINUED)

CLEANING THE NOZZLE

1. Make sure power cord is unplugged.
   Remove the air hose from the rear of the spray gun handle.

2. iSpray Nozzle only -
   a. Remove the air cap (a) by prying it off the connecting nut (inset). Loosen the connecting nut (b).
   b. Remove the parts as shown. Clean all parts with a cleaning brush and the appropriate cleaning solution.
      Reassemble all parts when clean.

3. Gravity Feed Nozzle only -
   a. Unscrew the nut and remove the air cap and nozzle.
      Remove the parts as shown(*). Clean all parts with a cleaning brush and the appropriate cleaning solution.
      Reassemble all parts when clean(**).

4. iSpray only - Clean the air vent (c) on the suction tube with a soft bristled cleaning brush or a bent paper clip.

5. Clean the rear of the nozzle (d) with the appropriate cleaning solution. Use a thin layer of petroleum jelly to lubricate the O-ring (e).

(*) The nozzle seal may become stuck inside the Gravity Feed nozzle when the nozzle is removed. If this occurs, make sure to pull it out.

(**) It is important that the nozzle seal inside the nozzle be re-installed properly. Make sure the cup side of the seal (the side with the groove) is facing out towards the front of the nozzle. Improper installation will cause leakage and damage to the turbine.
MAINTENANCE

REPLACING THE FILTERS

Attention

Before every use, you should inspect the air filters in the turbine to see if it is excessively dirty. If it is dirty, follow these steps to replace it.

Never operate your unit without the air filters. Dirt could be sucked in and interfere with the function of the unit.

1. Press the tabs on each side of the turbine to remove the filter covers.
   Remove the dirty filters from the turbine and replace with new ones. The smooth side of the air filter must be placed toward the turbine.
   Secure the covers back onto the turbine.

CLEANING THE AIR VALVE TUBE

If spray material ever enters the air valve tube, follow the steps below.

The air valve tube for both the iSpray nozzle and the Gravity Feed nozzle operate in the same manner.

1. iSpray - Pull the air tube (a) at the top from the nozzle, and. Unscrew the valve cover (b).
   Gravity Feed - Pull the air tube (a1) from the nozzle and the top of the container (a2). Twist the two halves of the valve seal housing to access the valve seal (c).
   Remove the valve seal (c). Clean all the parts carefully. Make sure to remove any material from valve seal housing area (d).

   The air tube and valve seal (c) are only solvent-resistant to a limited extent. Do not immerse in solvent, only wipe.

2. Place the valve seal (c) in the valve cover (b) with the pin facing into the tube. Installing the valve seal into the valve cover will be much easier if the valve cover is inverted.

3. Turn the nozzle upside down and screw on the valve cover (with valve seal inside) from underneath. Turning the nozzle upside down will prevent the valve seal from falling out of the valve cover during reinstallation.

4. iSpray - Place the air tube on the valve cover and on the nipple at the nozzle.
   Gravity Feed - Reattach the air tube to the nozzle and to the top of the container.
# Troubleshooting

<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Problem A: Little or no material flow</strong></td>
<td>1. Nozzle clogged. 2. Suction tube clogged. 3. Air vent on suction tube blocked. 4. Material flow setting too low. 5. Suction tube loose. 6. No pressure build up in container. 7. Air valve tube not functioning. 8. Nozzle seal missing. 9. Air filter clogged. 10. Spray material too thick.</td>
<td>1. Clean. 2. Clean. 3. Clean (see page 16) 4. Increase material flow setting. 5. Remove and replace as tightly as possible. 6. Tighten container or container lid. 7. Make sure both ends of the tube are connected and the valve seal is in place. 8. Replace nozzle. 9. Change 10. Thin*.</td>
</tr>
<tr>
<td><strong>Problem B: Material leaking</strong></td>
<td>1. Nozzle loose. 2. Nozzle worn. 3. Nozzle seal missing or worn. 4. Material build-up on air cap and nozzle. 5. No pressure build up in container.</td>
<td>1. Tighten. 2. Replace. 3. Replace nozzle. 4. Clean. 5. Tighten container or container lid.</td>
</tr>
<tr>
<td><strong>Problem C: Spray pattern too thick, runs and sags</strong></td>
<td>1. Material flow setting too high. 2. Air power setting too low. 3. Applying too much material. 4. Nozzle clogged. 5. Air filter clogged. 6. Too little pressure build-up in container. 7. Spray material too thick.</td>
<td>1. Decrease material flow setting. 2. Increase air power setting. 3. Adjust material flow or increase movement of spray gun. 4. Clean. 5. Change. 6. Tighten container or container lid. 7. Thin*.</td>
</tr>
<tr>
<td><strong>Problem D: Spray jet pulsates</strong></td>

</tbody>
</table>

*Only thin the material as a last resort to improve spray performance. Optimal spray performance should be achieved simply by adjusting the various controls on the unit.*

This unit contains no servicable electrical parts. Do not attempt to service yourself. Store indoors with the cord wrapped around the turbine handle.

Have you tried the recommendations above and are still having problems? In the United States, to speak to a customer service representative, call our Technical Service at 1-800-328-8251. See www.wagnerspraytech.com in the “Contact Us” section for Technical Service hours.
LIMITED WARRANTY

PAINT SPRAY EQUIPMENT

This product, manufactured by Wagner Spray Tech Corporation (Wagner), is warranted against defects in material and workmanship for one year following date of purchase if operated in accordance with Wagner’s printed recommendations and instructions. This warranty does not cover damage resulting from improper use, accidents, user’s negligence or normal wear. This warranty does not cover any defects or damages caused by service or repair performed by anyone other than a Wagner Authorized Service Center.

ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE IS LIMITED TO ONE YEAR FOLLOWING DATE OF PURCHASE. WAGNER SHALL NOT IN ANY EVENT BE LIABLE FOR ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES OF ANY KIND, WHETHER FOR BREACH OF THIS WARRANTY OR ANY OTHER REASON. THIS WARRANTY DOES NOT APPLY TO ACCESSORIES.

THIS PRODUCT IS DESIGNED FOR HOME USAGE ONLY. IF USED FOR COMMERCIAL OR RENTAL PURPOSES, THIS WARRANTY APPLIES ONLY FOR 30 DAYS FROM DATE OF PURCHASE.

If any product is defective in material and/or workmanship during the applicable warranty period, please call customer service at 1-800-328-8251.

SOME STATES DO NOT ALLOW LIMITATIONS ON HOW LONG AN IMPLIED WARRANTY LASTS OR THE EXCLUSION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATION AND EXCLUSION MAY NOT APPLY TO YOU. THIS WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS, AND YOU MAY ALSO HAVE OTHER RIGHTS WHICH VARY FROM STATE TO STATE.
